## **DETAILED ACTION**

### ***Claim Rejections - 35 U.S.C. § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 5, 7, 17-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With regards to claim 5, 7 it is not clear what specific portion/aspect of the RFC is included in the protocol parameter.

3. Claim 17 recites the limitation "the at least two predefined network states". There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 U.S.C. § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Art Unit: 2661

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Mishra(6,456,591).

With regards to claim 19, Mishra teaches a method comprising the steps of:

monitoring said network for determine the available bandwidth for transmission over said network(Col. 3 lines 8-18, since the amount of traffic submitted to the network tracks the available bandwidth it implies that the network is monitored for available bandwidth); and determining a quality state for transmission, (target image quality is determined based on feedback) said quality state corresponding to said detected available bandwidth(encoder bit rate is proportional to the target image quality, the bit rate is related to the bandwidth.hence the image quality corresponds to the bandwidth); adjusting bit rate for transmission in accordance with said determined quality state(adjusting the quantizer step size in the encoder adjusts the bits rate); and transmitting at least one packet over said network in accordance with adjusted bit rate.(col 3 lines 34-44).

Claim 36 is rejected for the same reasons as claim 19 because the network interface of each video source is connected to an ATM network hence the packaging of media frames and

protocol parameters in accordance with established bit rate is inherently taught because a packetizer is required to package video frames for transmission over the ATM network.

*Allowable Subject Matter*

6. Claims 1-4, 6, 8-16, 31-35 are allowed.
7. Claims 30, 37-38 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
